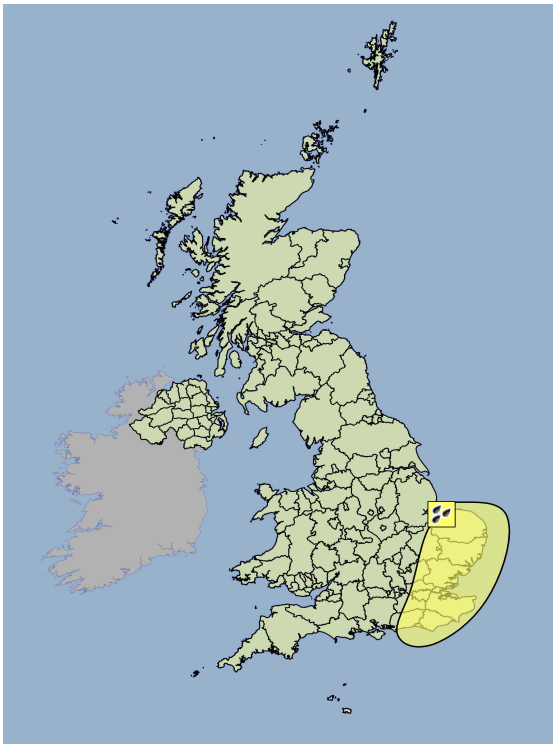
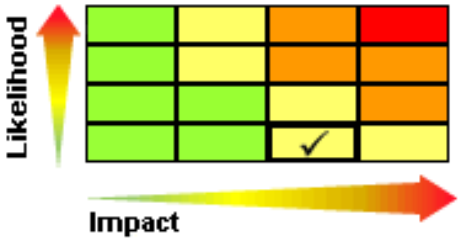
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of very warm air lies across southeastern areas today, providing a focus for locally intense thundery downpours which will give 10 to 15 mm of rain less than an hour. There is still a small chance of over 20 mm of rain in an hour in the far east of this warning area, and if these heavier storms develop impacts could still be more substantial. However, this warning has been reissued to reduce the overall size of the warning area and clear the storms from the far southeast by early evening.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:30 on Fri, 05th Jun 2015** until **19:00 on Fri, 05th Jun 2015**

Scattered thunderstorms will continue to affect parts of south east England and East Anglia today (Friday) before clearing away early this evening. Though many places will miss the heaviest rain, there will be some localised intense downpours, and the public should be aware of the risk of disruption due to surface water flooding. Localised minor impacts from hail or frequent lightning are also possible.
